

## PROFILE

### Engr. Vicente Albano Luz

The R & R Division has launched a month-long Health and Sanitation Drive in the three newly relocated barrios (Malbang Villarica, and Liberty) at the Tanauan resettlement area.

Formally launched by the Division Chief last August 1st, the drive has won the support and cooperation of local youth groups and civic associations.

Members of the Pambansang Kilusan sa Pagpapaulan Ng Pamayanan. (PKPP Pantabangan Chapter) and the Pag-asa Youth Movement of barrio Malbang, are coordinating with the UPRP in various community projects designed to promote health and sanitation in the barrio sites.

School children from Central Elementary School and the Saint Andrew High School in Pantabangan (town proper) have likewise embarked on similar projects. They have started planting ornamental and fruit trees along the streets of the new town site.

—oOo—

A six-room modern school building complete with both lighting and sanitation facilities was turned over recently to local school officials for use by school children in the three newly relocated barrios.

The school building which was estimated at P85,000.00 in construction cost is the first of three structures being planned for the school sites in barrio Malbang. Development of the more than three hectares school ground will be undertaken jointly by the UPRP and the settler children.

—oOo—

Some 300 participants in the Pantabangan Resettlement Socio-Economic Training Program (Resettlers Seminar) are scheduled to be awarded their certificates of completion on August 22.

The graduation rites will be a simple but an appropriate one with a program designed for the pleasure of some distinguished guests.

—oOo—

The first class of the Resettlers Seminars for residents of East Poblacion in Pantabangan townproper is scheduled to start on the 20th of August.

About 10 classes of 70 participants each will be opened for all interested and qualified resettlers.

The "Oras ng Pantabangan," a one-hour radio program aired every Friday over DWAR radio station will soon feature talents from Pantabangan.

Arrangements has been made with the program director for the inclusion of the musical numbers and poetry recitals by talented youths from Pantabangan.

What would you say about a man who have attended a series of ECAFE sponsored seminars on planning and design, have taken special lectures on design from SEATO, and who handles the field design section of the UPRP.

You would say that he is all and only for design—that as an engineer he just might as well confine himself to going over maps plans and endless figures—the job he loves and which he is adept at.

Any re-organization in the project have taken place, but his constancy in his line proves him firm in his position. He seems to have destined for such a role.

That is what Engr. Vicente Albano Luz is like. His diligence and the zeal with which he pushes on to perform his delicate function need not to be told. In fact, his industry combined with his reticence, has long become his trade mark. He is of the reversed type who would rather read books at home during his free hours or play chess rather than to spend the time out with his friends.

In terms of ideas and thinking, he is not so old fashioned and simple as would have you believe. Actually, he has managed to blend the old and the new himself, resulting in a unique personality, one

cannot find fault with. Take the case of his ideas in the rearing of the children, he believes that the parents must teach the children to be independent little by little as they grow old.

Engr. LUZ

Vic, or Enteng, as he is fondly called, is 5'-7" in height, slight bodied at 115 pounds and is only 43 years old.

In the family, he and his wife are both from Ilocos Norte, where he grew up himself. He believes that he looks like his father and got his reticent inclination from his father, too. He is quite hung up in music—ballads, operatic, a silent expression of his taste that he shares with his wife.

In his work, he derives the same flavor of the new and the old blended into an efficient force. As chief of the field design section, he exults in the many satisfaction he derives from it.
