### Balmaceda Praises Mun. Treasurers for Better Tax Collection

SORSOGON, Sorsogon—Zolio Balmaceda, Provincial Treasurer, lauded here today his team of treasury personnel and all Municipal Treasurers of this province for having collected from really taxes in June 1964 the amount of P48,842.53 compared with P36,705.10 in June 1963 or an increase of P12,137.43.

Balmaceda said that Pilar, with a collection of P7,264.90 compared to P1,907.41 last year or an increase of P2,357.49 topped the list of the municipalities registering increases in real estate tax collection. Gubat ranked second with P5,015.88 against P2,895.81 or an increase of P2,120.27. Of the sixteen municipalities in the province, only Bulan and Castilla failed to increase their collection for June as compared to a similar period last year.

### To Forest Concessionaires

Timber concessionaires must leave uncut trees which are 45 to 70 centimeters in diameter if they want their forest concessions to produce continuously. This was urged by Mr. Artemio Cosico, logging superintendent of the Bislig Bay Lumber Company, Inc., in a recent talk before students and faculty of the College of Forestry.

Speaking from experience Forester Cosico said that the Bureau of Forestry made a mistake when it merely prescribed 60 percent of the total volume of trees in an area as residuals without specifying the percentage left from each size class. (Residual stocks are the trees left for future harvest.) Because of this, the loggers usually leave the 20 to 45 centimeters d.b.h. trees (d.b.h. means diameter breast height usually measured at 1.3 meters high from the ground) which are easily destroyed during logging. He also observed that where there are many marketable trees in a logging area you cannot have a 60 percent residual stock especially if the terrain is rough and the trees are mostly White Lauan, Bagtican, and Almon. Cosico further observed that if you cut trees of the 50 centimeters d.b.h. the area will look like a kaingin. To preserve the area as forest land, what is required is to shift to the 60 cm. d.b.h. as the smallest size tree to cut. The Bislig Bay Lumber Company made it a point that two-thirds of the 60 percent residuals will be composed of the 45 to 70 cm. d.b.h. classes. The rest are composed of the 20 to 45 cm. d.b.h. classes. Doing this will ensure that in 35 years you can again log the area and obtain the same amount and quality of products, said Mr. Cosico.
