

The future for Chromite

(Continued from page 27)

that our investment has been well merited and will prove to be a real asset.

"Up to December 31, 1935, the investment of the Benguet Consolidated Mining Co. in this contract amounted to two hundred ten thousand, five hundred thirty-two pesos and fifty-four centavos (\$210,532.54).

MR. SCARFEN REPORT

In calculating the value of the Masinloc chromite deposit, the two most important factors to be taken into consideration are the amenability of the ore to metallurgical treatment and its marketability. There is no doubt as to the great quantity available nor the low cost of production. The ore is comparatively medium-grade—in fact heretofore material containing 32% Cr₂O₃ was considered non-commercial although during the World War high prices were paid for comparable ore. Up to six months ago our thought, in common with Benguet, was that it was a reasonable expectation to find high grade concentration within so large a mass but as development progressed it became evident that such was not the case in this particular instance. Realizing the importance of learning definitely the actual physical and chemical characteristics of the ore, together with its reaction to metallurgical treatment, your engineers decided on an independent investigation of these points.

Initially a small electric furnace was constructed at the Bureau of Science and a commercial grade of ferrochrome successfully pro-

Camote Bill

By W. JAMES PIKE

Camote Bill's head's way up in the air,
And his feet don't touch the earth;
He's struck it rich, he's free from care,
And he's bubbling over with mirth—
He's wondering how he'll spend the dough,

As soon as it comes to his mitt,
And he'll greet all the gang with a sonorous no,
When they ask for the loan of a bit.

A silk suit he'll wear on a Sunday,
And he'll buy him a new Stetson hat,
And though he'll wear overalls Monday,
No welcome will appear on the mat—
His old time friends will get the frozen face,

And the bums the marble court,
For with Bill they're all out of the race,
And Bill and his dough won't part.

At Camotes now he turns up his nose,
He eats Irish potatoes au gratin,
And wears on his feet fine silken hose,
And dresses his wife in black satin—
No more on his plate will you find a pig's head,
Bill says it's only fit for a dog,
His munching away on pork chops,
Instead,
And eating farther back on the hog.

The old corn cob now lies on the shelf,
It's hardly the thing to smoke

When a fellow is really rolling in pelf,
It makes him feel like a moke—
The gramophone now lies out in the yard,
A loud speaker functions instead,
The old wheezy records in the discard,
Bill tunes in on London, in bed.

He's left his old haunts, he's gone to the Pines,
Where he sits with both feet on a chair,
And loudly he talks of the wealth of his mines,
And sweetens 'em up with hot air—
A cowpuncher was Bill in a youthful day,
He'll never play golf you can bet,
He knows a sheepherder invented the play,
An affront he will never forget.

"A DROP ON YOUR HANDKERCHIEF"

IT LOOKS *the same*
as other square-edge belts,
BUT it has 14 Major Improvements

No other square-edge belt has yet equalled
GOODRICH Highflex in performance...
and we can prove it in your own mill

GOODRICH
HIGHFLEX

The Pioneer of square-edge belts

Goodrich over 10 years ago pioneered the square-edge belt. Goodrich saw definite advantages in the square-cut edge—greater flexibility—no ply separation (bootlegging)—longer life—better power transmission.
Goodrich Highflex has revolutionized belt manufacture. Goodrich was over five years ahead of the industry and today by constant research and improvement Goodrich is still five years ahead.

Some Recent GOODRICH Improvements	
Increased fabric strength	Higher flexing life
More uniform ply adhesion	Less power loss
Greater resistance to deterioration	No breaking in period
